Lec08作业

ZY2006109-姬轶

在IMP语言中增加取值和寻址表达式、修改指针指向的内容，其语法进行了如下扩充：

```
Command ::=  *Identifier =  Expression
Expression :: = *Identifier
        | &Identifier
```

解：

```
execute [*I = E] env sto =
      let val = evaluate E env sto in
      let loc = find(env, I) in
          let locI = feach(sto, loc) in
              sto(locI)
      update(env, sto loc)

evaluation [*I] env sto =
      let loc = find(env, I) in
          let locI = feach(sto, loc) in
              sto(locI)

evaluation [&I] env sto =
      find(env, I)
```
